Starting a new multisite (but it doesnt work(yet))

Posted by stichtingaight - 2011/02/05 21:43

Hello experts,

I'm trying to create a new website but when i go to the "deployed" url i'm redirected to the main website. There is no requesting for installation

Main website: http://stichting.aight.nu
Created multiwebsite: http://stichting.aight.nu/H3C

After creating I received this message that's saying its was succesful:

The site 'H3C' is deployed.
- You can now map your new domain (http://stichting.aight.nu/H3C) to the directory '/var/www/vhosts/aight.nu/subdomains/stichting/httpdocs/multisites/H3C'.
- When the DNS will be updated with your new domain (perhaps you have to wait 24 hours), you will can go to your new domain and Joomla will request you a new installation (as usual).
- Please use a new db prefix for each site and NEVER use 'jos' as prefix or if you want to keep 'jos' as prefix, create as many databases than you have sites.

The goal is to create websites that can use the same data from the main webpage, such as Articles, joomgallery and events.

I'm hoping you can help us!

The potential problem is the location where you deployed the slave site.
If the stichting.aight.nu is the master.
Then the deploy directory should be {root}/H3C

I think you deployed your H3C on a wrong directory.
I seems that you used {site_dir} in the deployed directory.
In this case, the domain must be {site_url}/multisites/{site_id}

Thank you for your quick responds!

I tried to change and recreate the multisite but i got a blanc page or the main website. I dont know what im doing wrong.

Maybe someone can help me configuring it.

So the mastersite is stichting.aight.nu and de slave site is going to be stichting.aight.nu/h3c

Site ID (*):H3C
Status (*): Confirmed
Owner: Empty
List of domain names (*): http://stichting.aight.nu/h3c
Expiration date: Empty

Folders customisation
Master site directory: /var/www/vhosts/aight.nu/subdomains/stichting/httpdocs
Template Deployed directory: empty
Deployed directory: empty
Template create deploy: empty
Create deploy directory:Yes
Template alias link: empty
Create an alias link: empty
Template Themes folder: empty
New Themes folder: empty

Nieuwe FTP Parameters
Template FTP staat: Standaard
Nieuwe FTP staat: Standaard

If you are trying to create your first slave site.
Why don't you used the tutorial video 9 and copy exactly the same value that are provided.

The Sample values described in the video are:

* Site ID = slave1
* Domain name = {site_url}/multisites/{site_id}
* Deploy directory = {site_dir}

Here it seems that you are defining a JMS Templates in which I don't see the "deployed directory" defined as it seems to be empty.
The deployed directory must be in line with the domain name.
As told you in my previous reply,
if the domain is stichting.aight.nu/h3c
then the deploy directory must be {root}/h3c

Thanks again!

Im sorry, im not a programmer so things like {root} i dont understand.
I also tried following the video but with the same results.

Can you please use my information so i know exactly what i must enter?

Much appreciated!

By the way i get

"No configuration file found and no installation code available. Exiting..."

I give you parameters that you just have to copy paste.
The {root} is a keyword that you can have the explaination when you put your cursor on the yellow light.

If you want that I setup your environment, I have a billable support that you can order at
http://www.jms2win.com/en/joomla-multisite?page=shop.product_details&flypage=flypage_multisites.tpl&product_id=35&category_id=1

I have already replied with all the value.
Start to do a copy/paste
