Share the whole site but unpublish only one plugin

Posted by canadareic - 2011/02/07 07:17

I have small challenge with one slave website

the situation is that we created iphone application and want to use slave iphone.domain.com with "share the whole site" option with www.domain.com

Unfortunately only one plugin on www.domain.com is not compatible with iphone and should be disabled on iphone.domain.com but left active on www.domain.com

Edwin

Is there a way to have this done?

Thank you very much

The only solution that I see is to modify the plugin to add a condition based on the Site ID to disable it dynamically.

Are you capable of doing This Edwin?

Email sent with the plugin
