Deployement Directory filed missing in jms

Posted by vinod - 2011/02/28 10:52

Hi,

I have installed the jms multisite in my local windows environment in that i can not find the deployement directory field,from above reply i have moved my application to linux environemnt even though i could't see the deployment directory field.Anything else i need to follow.Please assist me how to solve this issue,I have spend more hours on this

If you don't have the "Symbolic Link" not allowed on linux platform, verify the tutorial video step 4 to 7.

This probably mean that you don't have the Symbolic Link functionality available or that your linux is not correctly configured.
In particular, verify the availabililty of the Symbolic Link with the video 7
