Specify current frontend user as new slave admin?

Posted by venap - 2011/04/13 17:05

Hello,

Is it possible to specify the current frontend user as the administrator for a new slave site that is created through the frontend interface?

For instance, let's say I'm user Foo, and I access the frontend slave creation form. I fill out the fields and create a new slave site for which I'm automatically set as a Super User with my current credentials, instead of having to specify an email and password for a "new" administrator user.

Thank you in advance.

Best regards!

For the moment, the only way to compute automatically the "email" address based on the current user logged, is to create a specific JMS Layout and compute it in the PHP code.

We expect in the future add the possibility to fill the administrator email with a new keyword but this is not yet present.

Perhaps I will do also the same for the password. This is a little more complex as it is encrypted and can not be decrypted.
