Share modules?

Posted by brainworks - 2011/05/16 22:15

---

hi,

is there a possiblity to share modules for subdomains?

thanks
beate

To share the content of a module, you have to share the content of the extension.
Otherwise, this require to create a specific "multisites XYZ" module that is able to read the information from another website.
This is what we did with the "Multisites Content Module" that is able to read the content from another website.
