error in using the slave website

Posted by gkvhotel - 2011/07/25 13:51

---

hi
i m newbie to JMS component. i have gone through the documentation provided but it doesn't help much.

i am using Joomla 1.6.3
Win Server 2003
& IIS 7

i m using joomla for my intranet website where i want to use multisite but every-time when i configure the slave website an error is occurred stating that
"no configuration file found & no installation code is available" :(

please help !!

thanks in advance

This error message is frequently replied in this forum.

This mean that you don't have the "configuration.php" and the "installation" directory available to create a fresh slave site.
So you have to verify that you effectivelly have the "installation" directory present in your master.
Check that you have correctly installed all the patches.
