Problem with slaves wesites

Posted by Boarii - 2011/08/02 18:32

Hi there..

I am trying for like 3 hours now to get it work like i want but not working :S i have been watching the video tutorials and

So here is what i want..

I want to make multi website that use

*same data base
*when u logoin in one site it will make u online in in all my sites
*use fresh install kunena för each site
*use mtree for each site.
*all kunena profile + pm links to the main jomsocial

I have:

Joomla 1.5.23 and latest of multiwebsite.

How can i do that pls? what have i do when i install a template? i think i dont do right when i make a template..

(Sorry for my english)

You mentioned that you want to create website with "fresh kunena" and in the same time that you want to share the JomSocial users.

So I suggest that you create website with the following architecture.

+ Users

+ Fresh Kunena
    + Subsites

The "users" website should be installed with JomSocial and will be used to store the users.
Create a "kunena" website sharing the "users" like explain in the video 16
Install the kunena forum in the "kunena" site.

Once you have the "kunena" website that is sharing the users, you can use this one to build the subsites.

So you have to create a "fresh slave" for the "users" website
Install JomSocial on the "users"

Create a JMS Template rule to build the "kunena" website like illustrated in the video 16
Install Kunena

Create a JMS Template rule to build the "subsites"

If you want that we help you install, setup that on your environment, this is also possible with our billable support that can be ordered at
http://www.jms2win.com/en/joomla-multisite?page=shop.product_details&flypage=flypage_multisites.tpl&product_id=35&category_id=1
