Symbolic Link

Posted by michelpouli - 2011/12/21 14:11

Hi,

I ran the hello.php on several of my domainnames, but I got the error "Symbolic Link is forbidden". I contacted my hosting provider about this and he answered:

"It is certainly possible to make a Symbolic Link, this is supported by our server. We don't know why you receive an error message."

What could cause this error message and what can I do about it?
