Multisites architecture

Posted by ElDourado - 2011/12/27 17:36

Hello:

I need some advice for this:

I have this wesite, let´s call it www.website.net

I will use a redirection plugin so that people in Spain, can be redirect to es.website.net and people from Portugal to pt.website.net

For my experiences I think it´s better not to share extensions.

Share Joomla instalation: Yes
Share Joomla and jomsocial users: Yes
Share templates: No
Share extensions: No
Share DB: No

What I want is that a user can have acess to the diferent websites with the same login

Apreciate your sugestions

Thanks

Jose
