

Multisites architecture

Posted by EIDourado - 2011/12/27 17:36

Hello:

I need some advice for this:

I have this website, let's call it www.website.net

I will use a redirection plugin so that people in Spain, can be redirected to es.website.net and people from Portugal to pt.website.net

For my experiences I think it's better not to share extensions.

Share Joomla installation: Yes

Share Joomla and jomsocial users: Yes

Share templates: No

Share extensions: No

Share DB: No

What I want is that a user can have access to the different websites with the same login

Appreciate your suggestions

Thanks

Jose
