

Extensions on slave site

Posted by ferdybassi - 2012/02/02 18:00

- 1) Installed Joomla.
 - 2) Installed JMS
 - 3) Installed plugins and extensions on master site
 - 4) Created slave site from scratch. No template, just "Manage sites - New". I choosed to have a different slave path, in /var/www/jms/multisites/slave1
 - 5) Went to "Tools", selected slave site and tried to install a plugin.
 - 6) I got the error I attached here.
- I got this error for every plugin/component I try to install.

Which is the Joomla version ?
Which is the JMS version ?

Do you use the JMS from the master website or do you try to use the JMS tool from a slave site ?

Joomla 1.7.3
JMS 1.2.72
I'm using the JMS tools from the master web site.

Thank you.
