Extensions on slave site Posted by ferdybassi - 2012/02/02 18:00

1) Installed Joomla.

2) Installed JMS

3) Installed plugins and extensions on master site

4) Created salve site from scratch. No template, just "Manage sites - New". I choosed to have a different slave path, in /var/www/jms/multisites/slave1

5) Went to "Tools", selected slave site and tried to install a plugin.

6) I got the error I attached here.

I got this error for every plugin/component I try to install.

Which is the Joomla version ? Which is the JMS version ?

Do you use the JMS from the master website or do you try to use the JMS tool from a slave site ?

Re: Extensions on slave site Posted by ferdybassi - 2012/02/05 17:25

Joomla 1.7.3 JMS 1.2.72 I'm using the JMS tools from the master web site.

Thank you.
