Admin users info not updating while creating slave

Posted by leiphartb - 2012/02/14 14:12

Hi,

While creating slave sites through front end super admin details of slave sites are not updating(It shows super admin of master site). Following are the parameters set in website template.

List of domain names (*): http://{site_alias}

Admin User (*):Admin (tried users also)
New Admin full user name: {user_name}
New Admin user login:{user_login}
New Admin email address:{user_email}
New Admin password:{user_psw}

Thanks

I had same issue in back end, hadn't tested front end yet. Can you update email and password from back end?

Hi,

No both front and back email and password not updating.

_____

The parameters that are described are use for the front-end.
You can not update the parameter from the back-end.

The parameters update the select admin user and when there is no user select, this update the first user with super admin rights.

So to make it works correctly you have to select an admin user that will be modified with the user name, email, login and password.
Otherwise, you will think that it does not work but it will works on the first super admin user.
