Want replica of Master database with out JMS compo

Posted by leiphartb - 2012/02/14 14:23

Hi,

Please tell me how to define website rule which will replicate master databse with out jms component and mod_login(module) disbaled .

I am using front end dynamic site creation , replication of master database will helps to duplicate latest changes in master sites to slave site. But i dont want jms component and joomla login module in slave sites. I know we can un install extensions through Tools option available in JMS, but how can i do it dynamically through template rules .

Thanks

I believe if you do this it will give you what you want:

1) Create a slave site (back end) then configure it how you want the front end sites created (Uninstall JMS and Joomla Login)
2) Crete a new template based on the slave site you created in step 1 as your front end template

Hi,

Thank you for your update. But i want latest updates (users, latest contents etc) in master site carried to slave site.

Thanks

The answer of djdesjardins is correct.
In addition, if you want to have the same users, you can create the "template site" (step 1) that share the

user with your parent.
You can also use the "Article Sharing for JMS" to read the article coming from your master.

So if you create the website like in step 1 with the sharing of users and sharing the articles, when you will build the other website, we think that it will give you the result that you expect.
