JMS Multisite Virtuemart product sharing

Posted by diegovitali - 2013/03/19 14:11

_____

First of all many thanks for your great extension.

I installed JMS Multisites and Single Sign In Plugin on master and slave site to extend a Virtuemart site into slave sites.

I want to share all Virtuemart tables, including products, categories, orders and users.

I made a single fresk slave site with "SHARE ALL VIRTUEMART" flagged but products seems to be replicated.

Thanks in advance.

Diego Vitali

_____

How did you setup the sharing for VM.

You mentioned the word "fresh slave".

The sharing requires to replicate an existing website.
So in your JMS Template rule, you need to select a website to replicate and specify that instead of replicate the VM tables, you want to share it.

If you have purchase a JMS 1.3, see the rule like "shareMasterDomain" where you can find that the website selected is the master.

Perhaps you could review the tutorial video 16 that show how to share the users.
This is exactly the same with VirtueMart.
