Component not found error in master and slave both

Posted by mukeshraj41 - 2009/08/27 12:16

---

hi all,

I have created a custom component for my admin which works well on the local but some how it does not works well on the server on both master as well as slave admins.

pls note that its a customized component so i did not install i just did some customisation in the component table and and created new table for my component .

I hope things are clear what i mean .

I just want to know if i have to do any configuration in multi-sites componet tables to add my component .

Im not sure where i went so may some one could help me with thier previous experience .

the error is

404 - An error has occurred.

Component Not Found

Call stack
Function Location
1 jadministrator->dispatch() /home/pacept_com/www/joomla/administrator/index.php:97
2 jcomponenthelper::rendercomponent()
/home/pacept_com/www/joomla/administrator/includes/application.php:136
3 jerror::raiseerror()
/home/pacept_com/www/joomla/libraries/joomla/application/component/helper.php:120
4 jerror::raise() /home/pacept_com/www/joomla/libraries/joomla/error/error.php:171
5 jexception->jobject() /home/pacept_com/www/joomla/libraries/joomla/error/error.php:136
6 call_user_func_array() /home/pacept_com/www/joomla/libraries/joomla/base/object.php:48
7 jexception->__construct()

Thanks,
Mukesh:)

If you have developped your own component without installation, you are probably a programmer and you can see that line administration/index.php seems tells you that the "dispatch" is not present.

So ask your programmer to debug the reason.

All I can tell you is that JMS require the "manifest" files (XML) that describe the package to be able using the slave site installation.
If you hack directly the DB, this is outside of JMS.
I don't think that the problem is JMS related because if it does not work also on the master website this probably mean that the problem is outside

==========

Solved

_____

hi all,

Thanks for the reply.

The problem is solved .

Actually the problem was that my class name was HTML_aktuelles and i was referring it with file name as admin.Aktuelles.html.php .. so if you see the capital A thats was the problem i renamed it to small a and error gone

any way thanks all

Mukesh
