anyone tried the extension oziogallery?

Posted by attiburro - 2009/10/22 14:29

I tried to make it work on a couple of slave sites and it seems to work but the validatro http://validator.w3.org gives me alot of errors.
The extension is quite usefull and you can get it from here:
http://oziogallery.joomla.it/
The errors on my slave sites are here:

http://validator.w3.org/check?uri=http%3A%2F%2Fbarbyblos.com%2F&charset=%28detect+automatically%29&doctype=Inline&group=1&user-agent=W3C_Validator%2F1.654

Any idea would be appreciated cause i was already in a mess till now installing Jms but this time i suppose i need expert help.
Thanx in advance
Attilio Burroni

When you analyze your HTML code generated, you can see that you have a inside the table and that your iframe mixte the syntax with parameters using & and &
Probably you should only use the & and not use inside the table.

Ecco alcune dell enostre foto. In attesa del sito:
