Multisite & Jomsocial - Erros plugin

Posted by maygeii - 2009/11/06 02:45

Hi,

I have recently bought JMS Multisite and JomSocial as they are suppose to be compatible.

I have installed both component on a fresh joomla and created a slave. Installed Jomsocial from Master and some plugins. Jomsocial seems working well but they are some errors:

* I cannot add Application from front-end (blank popup)
* If application installed (from backend) I cannot change settings.
* I cannot use facebook connect
* Invite friends does sent a link to reister on slave 1 even if invite is done from slave 1.1 (created from front-end as child of slave 1)

... and I am sure they are more bugs I haven't detected yet.

http://www.jms2win.com/images/fbfiles/images/Clipboard02.gif

I have install and reinstall few times from scratch but the same happen each time.
I have updated to the latest version of the 2 component and joomla, no changes.

Any idea or help for this bugs?

Regards,

Kevin

If you want to see a working environment with sharing jomsocial and facebook, you can go on :
- http://jomsocial1.jms12x.demo.jms2win.net/
- http://jomsocial1a.jms12x.demo.jms2win.net/

The jomsocial1A website share the users with jomsocial1 website

First you have to check that you have correctly share the jomsocial users in joomla.
After that you have to configure the facebook connect.
The configuration of facebook is not easy and a correct subdomain definition in facebook is important

I have the same problems.

-I create a master website
-I create a template
-I create a slave from template, and use jomsocial

popup doesn't load.

and what do you mean by:
"First you have to check that you have correctly share the jomsocial users in joomla."

Thanks.
Regards
Arried

If your problem is the facebook connect with JomSocial, check careffully the parameters that you have defined in the Facebook and mainly the subdomain that you have provided.

Hi Edwin,

I finally know why my jomsociall popup doesn't load content, it's because of Azrul System Mambot doesn't there..

Azrul System Mambot plugins can not be implement on jomsocial installation or with reinstalled jomsocial system plugin. I don't know how, but i added manually a line of Azrul System Mambot in jos_plugins table.

(id, 'Azrul System Mambot', 'azrul.system', 'system', 0, -1000, 1, 0, 0, 0, '0000-00-00 00:00:00', ''),

This is fixed my problem.

Thank you

This means that you have not installed this plugin with the JMS tools.
If you have added this records manually in the slave site, this is the same than installing it with JMS tools.

Thank you for the solution that may help other customers in the future.
