Multisites and RSForm Pro

Posted by Krachtstroom - 2010/06/24 14:08

I have a master and two slave sites, which are copies of the master. In the slave site a create a new form with RSForm Pro. I change the formId in my menu-item. Things works well.

Only problem is when I want to change the Thank yoy message for that form. In the popup I get the login screen of Joomla. When I login I get the message Invalid token.

So I can't change my Thank you message. Anybody an idea?

Regards,
Hans

If you receive a new login form, this is perhaps because you changed of domain and that you are not more on the same website.

Check if you have defined the slave site with www and without www.
Perhaps also http and https.
