Is CB 1.2.2 compatible to JMS 1.2.32?

Posted by iostream01 - 2010/07/07 09:00

Hi,

Is CB 1.2.2 compatible to JMS 1.2.32?
When i try to install JMS on our site. Our CB pages crashes. It has this error :

Fatal error: Call to undefined method CBdocumentHtml::getDirection() in /home/domain/public_html/administrator/components/com_comprofiler/comprofiler.class.php on line 1492

Have any idea?
Your response is greatly appreciated.

Thanks,
Norman

YES JMS is compatible with CB 1.2.2 and we have re-tested it with success.

The error message is related to a CB Framework that seem to call a getDirection function that does not exists.

Can you give more detail on how to reproduce this problem.
We have tried to do it and were not able to have any call to this routine - so we don't know the context and the scenario to use.

Thanks Edwin,

I had just re-install our CB on our site, and it works fine now. I'm just worried when i re-install the patches comprofiler on JMS patches the error might come back. Its my guess, but not quite sure JMS causing that error. At the time,i was only working on JMS and our CB got crush.

I wonder why..

Thanks,
Norman
