JMS, multisite for joomla - Joomla Multiple Sites and user sharing

Frontpage Slideshow
Posted by Ijk - 2010/10/14 02:35

Hello,

I am trying to figure out how you would share frontpage slideshow component (from Joomla Works http://www.joomlaworks.gr/content/view/24/42/) on your slave sites and have the slave sites each have different images. Frontpage slideshow saves the images in the /components/com_fpss/images folder. Is there a way for this folder to be unique on the slave sites, so they can each have their own images? If so, how would you set this up?

Thank you.

Hello,

If you want to have Frontpage slideshow specific directors, go in its configuration and change the path to

If you want to have FrontPage slideshow specific directory, go in its configuration and change the path to the images/stories directory
