# Mosets Hot Property

Posted by tchager - 2010/11/10 22:54

---

I created a slave site then went to the master site and from the tools menu clicked on my slave site that I wanted this component installed on and in the drop down box selected "install from master" upon doing so I got this error message:

XML Parsing Error at 2171:49. Error 68: XML_ERR_NAME_REQUIRED

I then went to the slave site and it appears the component is working but just wanted to make sure this error was not going to cause a problem in the future possibly?

This error seems report that there is a syntax error in the manifest of the extension.

Perhaps you could verify the XML file a the line 2171. It seems that an XMK tag require a name that is missing.

Perhaps this is an error that you should report to the author of the Mosets Hot Property extension.
