Any Calendar Component and JMS2Win

Posted by d2drummer - 2010/12/21 02:44

Does anybody have any calendar/event component working successfully with JMS2Win. I've tried Jevents and Eventlist both with limited success. Was going to try RsCalendar, but its not on the capability list.

Just curious. All I require is:

1. Event Calendar with main calendar(main site) and calendars for each sub-site
2. Calendars/Categories must be able to be shared between sites

I was able to get eventlist 1.1 working, but it's features are limited and there are issues with sharing event locations between sites.

Looking for anything that works!
Thanks
