Techjoomla Invitex Not Working

Posted by rguillory - 2011/03/18 15:54

I have Techjoomla's Invitex, Is there a patch for this?

Not yet.
When an extension is not defined in the JMS Tool menu, you can always install the extension for the back-end of the slave site. This is the method that was used before that we created the JMS Tool menu.

As you send us the extension in an email, we will review it and add its definition in a next release.
