Seblod 2.0
Posted by joomleb - 2011/04/15 10:15

Looking for jSeblod-CCK compatibility (Seblod 2.0 next 19th April CCK jSeblod Extension)
I just found this old topic unresolved (may be),
So, Please, Can JMS work with Seblod 2.0 (jSeblod-CCK 1.8.x) ?

Many Thanks

If you want that we review this extension to add its definition in Jms Multi Sites, please send us this extension in the attachement of an email.
Our email is in our contact us
http://www.jms2win.com/en/contact

Hi Edwin,
sorry for delay, but:
1 - I waited the new Seblod 2.0 release (now here attached) pkg_seblod2_rc1.zip
2 - I noted you rebuild the list of extensions currently defined in JMS (well done) where the "old" jSeblod CCK is listed as "install".

So, now, my question is more detailed:
Thinking on joomla 1.6.x and new Seblod 2.0 I want build a portal (my JMS master) where develop some services (using Seblod).
So, for example, I develop a Real Estate form and customer login into my portal and add/public his advices (joomla articles + Seblod).
At the mean time his advices are published on his site (one of my JMS slave).

Well, if I understood, this can be done "sharing the users" and using the "Articles sharing" component (my be I have to wait the joomla 1.6 version, where problably will be added the all the ACL functions, so the ability to share articles depending on author id, group, ACL level etc.)
What I'm missing is if Sharing articles I will share also the Seblod forms etc. build on the portal (master).

If I'm right, the questions are:
1 - When can we expect an "Articles sharing" for joomla 1.6 release ?
2 - Can I share Seblod 2.0 ?

Hoping to have explained well what I meant,

Many Thanks
PS Sorry, but really I don't know how to attach the file... Please, what I'm missing ?

Please send the extension in the attachement of an email.
I can not recover your file.

We are working on the "Article Sharing for JMS" compatible with Joomla 1.6.
It is not yet available.

Jseblod can not be share because it uses the standard joomla articles, categories, ... that can not be shared like the extension. This is the reason why we created the Article Sharing for JMS.

I will wait that you send the version 2.0 to review my current status as this is what I know with the previous version.

I sent you Seblod by email infoAT....

So, if is confirmed after your review, I'll can share joomla 1.6 articles designed with Seblod 2.0 using Article Sharing for JMS (compatible with Joomla 1.6).. Is it right?

Have you an approximately release date for "Article Sharing for JMS" compatible with Joomla 1.6 ? (days, weeks or months)

Waiting your review, Many Thanks

Seblod can be installed but not shared.
There are call to section, categories and articles (content).

Concerning the Article Sharing for Jms compatible with joomla 1.6 will be in may (as we are already end of april and will not have finished).

Thanks for reply Edwin,
and Sorry, I'm not sure to understand well what you mean:

Right now:
joomla 1.6.x + JMS + SEBLOD 2.0
= joomla 1.6 articles "designed" with new SEBLOD 2.0 can be installed but not shared

In May (and/or when "Article Sharing for JMS" compatible with Joomla 1.6 will be available):
joomla 1.6.x + JMS + SEBLOD 2.0 + Article Sharing for JMS
= I can share joomla 1.6 articles "designed" with new SEBLOD 2.0

Is it right?
Please, Can you confirm that I understand it?

Yes ou can use the Joomla Article and SeBlod but can not be shared.

No we will not develop a version of the Article Sharing for Joomla that will works with SeBlod.
We are developing the same version that you have for joomla 1.5 but for 1.6 - So no SeBlod.

What you request is the development of a multisites seblod.

So the final answer is that you can NOT share seblod.

So, right now, can NOT share SEBLOD. But:
- Is it a technical limit and will never be exceeded ?
- Or a special component development is needed to share SEBLOD (something like "article sharing"). In this case, Are you interested to develop it ? Is it too difficult ? How much is it ?

I thought to use SEBLOD 2.0 for this project because:
"UNIVERSAL extension for customized content type construction. EXTENDS core content. FULLY INTEGRATED without any hacking! FRONT-END and BACK-END (website and administrator) content entry forms. SEARCH and LIST features are amazing.
NATIVELY COMPATIBLE with all regular Joomla extensions. Work together with all plugins."

In any case I also want ask you, in your opinion (as programmer and JMS admin), What are the best extensions (in this categories) to work with JMS:
- Content Construction
- Forms

as always, Many Thanks

One year ago, I had contact with SeBlod team and give them Jms Multi Sites to allow them create a multisites SeBlod.

So for the moment, I don't have any solution for you.

Concerning forms, the simpliest and the one that can be shared and also for which we have possibility to create partial sharing is ck_forms.
The partial sharing require specific support to modify the extension at each new version of the ck_forms but this is possible. The latest time we modified it is for the ck_form 1.3.3 b5

See our list of extension that may perhaps help you identifying another CK extension.

Well, in first (I think is clear) I'm asking you because I believe JMS is a must for any joomla user, so, realy, many thanks for answers.
At the mean time I believe CCK features is a must for joomla.
SEBLOD 2.0 seem to be really part of joomla beacuse its Universal and can work with all the Extension like Hika Shop / Virtuemart etc.

Now, I'm looking to find a solution for our project, but for it I'm trying to understand what is situation (I'm not a programmer).

If you had contact with Seblod team one year ago I think that technically the "JMS compatibility" cannot be solved working on JMS and/or some JMS components, but only working on SEBLOD, am I right?
So, if I have: joomla 1.6 + JMS + SEBLOD 2.0 + Hika Shop, and use SEBLOD for add/modify Hika Shop page products, these cannot be shared also if Hika Shop lonely can be shared with JMS. Right ?

This is because SeBlod access all the tables that I can not share it.
If I share SeBlod, I need to share the whole websites.

I have suggested to Seblod different solution but it seems that they was not ok form them. Otherwise, I suppose that would have integrated them.
