

## Ninja RSS Syndicator compatability

Posted by jonhubbard - 2011/04/26 10:36

---

Hi

I am trying to use the Ninja RSS Syndicator which seems to work fine, other than that the feeds appear to overwrite each other.

For instance:

[http://www.workingforwiltshire.com/index.php?option=com\\_ninjarsssindicator&feed\\_id=2&format=raw](http://www.workingforwiltshire.com/index.php?option=com_ninjarsssindicator&feed_id=2&format=raw)

produces the same feed as

[http://www.chippenhamlibdems.org.uk/index.php?option=com\\_ninjarsssindicator&feed\\_id=2&format=raw](http://www.chippenhamlibdems.org.uk/index.php?option=com_ninjarsssindicator&feed_id=2&format=raw)

even though they are produced by two different slave sites.

I recognise that this is probably due to the plug-in not being compatible with Multi-Sites so my question is:

- i) can it be made to work; or
- ii) is there a RSS syndicator that is compatible?

Many thanks

Jon

Generally, RSS feeds call the website using the port written in the URL.  
Perhaps you have to add a synonym in the slave site that correspond to  
[workingforwiltshire.com:80](http://workingforwiltshire.com:80)  
and  
[chippenhamlibdems.org.uk:80](http://chippenhamlibdems.org.uk:80)

to avoid reading the "default" website (the master website).

Thanks for the response

Unfortunately this does not seem to make any difference ;-(

Are you aware of an RSS Syndicator that does work with Multi-sites?

Thanks

I know that standard RSS is working.

Concerning Ninja RSS, I can just tell you that I have declared it when that was the version 1.0.9.d
