sh404SEF component does not work in any slave site

Posted by MaxDM - 2011/11/18 11:54

Hi There.

I just installed the sh404SEF component in the master site without problems (works perfectly).
After that, i installed the component in each slave site using the jms tools panel and everything goes well.
But now comes the problem.
When I try to access the component from the backend of the site slave, it returns me an error:

Errore HTTP 500 (Internal Server Error).

I did some tests but I can not find any solution.

Any ideas?

My specific:

Joomla 1.5.24
JMS 1.2.69
JMS Patch 1.2.73
sh404sef 2.3.0.988

Thank you very much!

Try to find the "Error log" files where the "Internal Server Error" gives more detail.

Internal Server Error can be due to plenty of reason.
Among them a problem in the content of .htaccess.

Check the rewritebase parameter
