Kuenea
Posted by dborko - 2012/02/26 01:24

_____

I have installed Kuenea in the Master Site First

When I try to install it in the Slave Site I get a message that says it is not installed in the Master Site, and so it will not install onto the slave.

I am using JMS 1.277 on a Joomla 2.51 installation.

_____

Which version of Kunena do you try installing ?

_____

no, via joomla installer

_____

I confirm that I can reproduce the issue.
So now, I can analyze this Kunena 1.7.2 version to understand the reason.

_____

I have identified the reason and a fix will be available in the next JMS 1.2.78 version.
