don't display plugin Joomslide or arijoom Images

Posted by tpacontrol - 2012/05/07 06:20

---

i use article sharing version 1.1
install on master and slave site
in content i use plugin joomslide and arijzoom for Images. but article sharing plugin not show these plugin.

link :
http://oto.xemtatca.com/index.php?option=com_multisitescontent&view=article&id=1%3Avinaxuki-3500tl&catid=4%3Avinaxuki-quyet-thanh&site_id=oto.xemtatca.com&lang=vi

please help me fix it !

Some plugin have a filtering to check the context in which they are called.
So if they check that option=com_content, that mean that they will not perform any task for the "com_multisitescontent".

Send use the plugin in the attachement of an email.

Concerning the JoomSlide plugin, there is no specific control concerning the "com_content" option. So it can be used.

Concerning the "ARI Smart Content", we have added the definition for the JMS Tool and this will be available for a next release of JMS.
It also a plugin that check amoung the list of component that you have enabled. So check that the plugin

is enabled for the "Multisites Article Sharing".

Concerning the URL that you provided in your post, it does not work and report that the article no 1 does not exists. This is not related to the images that are not displayed as the whole article is not present.
