Partial user sharing stopped working?

Posted by mattesar - 2012/10/22 17:25

Hello,

I have replicated a site today using a template (the template replicates a slave site). I use partial user sharing - the template "User Sharing" option is set to "Share users filtered on site ID and exclude the ACL".

After I replicated the site, it seems that partial user sharing stopped working...all shared users (except the super user) seem to have disappeared from every slave site.

I have replicated many times without a problem before - but this time I (stupidly?) decided to leave the "Owner" unselected.

Can you give me any ideas on what might have happened? Thank you.

I have found out the cause. Sorry- mea culpa.

Last week, I have restored my Joomla site backup to another database (different db, db user and db pass) - and it seems that I have forgotten to change each and every configuration.php of my slave sites.

So....yeah, my own stupidity and carelessness. I apologize and thank you.
