ReCaptcha in multisitescontact not showing Posted by sheena - 2012/11/30 12:20
Hello,
am using Joomla 2.5, Jms 1.2 and Multisitescontact 1.0.6 successfully.
would like to enable the recaptcha plugin (from Joomla) for my multisitescontact pages.
have enabled the recaptcha plugin, and also selected it in the Contact Options, so that it is showing and fully functional on the standard contact page (com_contact).
But using com_multisitescontact, the recaptcha portion does not display.
Here are links to the same contact, using the two different components so you can see the diverse behavior.
http://www.ludlums.com/component/contact/contact/69 reCaptcha working http://www.ludlums.com/component/multisitescontact/contact/69 Not working
Thanks for your help! Sheena

P.S. I also tried purging the converted files in the cache, via the Multisites Contact administration area.

We are able to reproduce the behavior that you described. So now, we can investigate the reason why the "reCaptcha" is not displayed.
