New Menuitem: Select Article from Master Site

Posted by iage - 2013/02/19 11:17

_____

hello,

I have the following issue:

1. in SlaveSite: Add new Menuitem of Type 'Multi Sites Article Layout'
2. site -> Master Site; Click on 'Select / Change' to find an article
3. Popup appears, enter search string and search for an article: No results
4. Close popup and reopen it
5. previously entered search string is still filled in and the found articles are listed

It should find the articles in the first search (point 3.).

kind regards

-Stephan
