New Menuitem: Select Article from Master Site Posted by iage - 2013/02/19 11:17
hello,
I have the following issue:
<ol> <li>in SlaveSite: Add new Menuitem of Type 'Multi Sites Article Layout'</li> <li>site -&gt; Master Site; Click on 'Select / Change' to find an article</li> <li>Popup appears, enter search string and search for an article: No results</li> <li>Close popup and reopen it</li> <li>previously entered search string is still filled in and the found articles are listed</li> </ol>
It should find the articles in the first search (point 3.).
kind regards
-Stephan
