Strict Standards : non static method Jms2win

Posted by grageot - 2013/05/15 21:42

Hello
my config : joomla 2.5.11 and JMS 1.2.97

A master site : http://portail34.catholique.fr/
And 2 slave sites (1 new and 1 since 1 year)
Since 2 days I receive the above notification :

Strict Standards: Non-static method Jms2Win::matchSlaveSite() should not be called statically in /home/users3/c/centredms34/www/portail/defines.php on line 50

Strict Standards: Non-static method Jms2Win::_getCurrentURL() should not be called statically in /home/users3/c/centredms34/www/portail/includes/multisites.php on line 6

Strict Standards: Non-static method Jms2Win::_getHostInfo() should not be called statically in /home/users3/c/centredms34/www/portail/includes/multisites.php on line 6

Strict Standards: Only variables should be assigned by reference in /home/users3/c/centredms34/www/portail/plugins/system/jcemediabox/jcemediabox.php on line 337

Strict Standards: Only variables should be assigned by reference in /home/users3/c/centredms34/www/portail/plugins/system/jcemediabox/jcemediabox.php on line 142

In the JMS2 amdinistration patches are updated
When I want to open site admin I receive a long list of notifications like

Strict Standards: Only variables should be assigned by reference in /home/users3/c/centredms34/www/portail/administrator/components/com_multisites/controller.php on line 286

Strict Standards: Only variables should be assigned by reference in /home/users3/c/centredms34/www/portail/administrator/components/com_multisites/controller.php on line 287

Strict Standards: Only variables should be assigned by reference in /home/users3/c/centredms34/www/portail/administrator/components/com_multisites/controller.php on line 291

Strict Standards: Only variables should be assigned by reference in /home/users3/c/centredms34/www/portail/administrator/components/com_multisites/controller.php on line 295

...

On my server I have checked the PHP.ini

Display_errors is OFF

I have the same problem with the 2 slave sites

Thank you for helping

_____

If you receive suddently these errors, this is probably due to a PHP version modification or settings.

In the PHP.ini, in addition of the display off, you can modify the error level of reporting.

See "error_reporting" parameter in the php.ini
Add the "~E_STRICT" to ignore the reporting of strict messages.

JMS 1.3.x fix most of such errors.

Another possibility is that you add a line at the begining of
/administrator/components/com_multisites/admin.multisites.php

error_reporting(JFactory::getApplication()->getCfg('error_reporting') & ~E_STRICT);

_____

Thanks for the answer
PHP.ini is on the server I am using. I can only spécify some variables.
I can't change error reporting parameter.
On the same server I have 2 other masters sites with a lot of slaves sites and these run well. Then I think that PHP parameters are well configured.

I have modified the file "admin.multisites.php" and added the line :
error_reporting(JFactory::getApplication()->getCfg('error_reporting') & ~E_STRICT);

but nothing have changed

I can try with the 1.3 last version but can I update from 1.2 directly with extension manager without risk for the slaves site ?

==========

_____

For any update/upgrade of an extension, it is always recommended to have a backup.

The upgrade from JMS 1.2.x to JMS 1.3.x is easy.
You can install JMS 1.3.x over the JMS 1.2.x
