Fatal error: Call to a member function children()

Posted by ludo - 2009/07/15 13:36

I'm trying to use this to populate a new site from a template. It looks like I have everything set up correctly from what I can tell.

The Template adds correctly and then I go to add the site and it gives me the error below.

Fatal error: Call to a member function children() on a non-object in /path/to/joomla/administrator/components/com_multisites/classes/dbsharing.php on line 112

Is there something I'm doing wrong or what? After I go back, it says it's created. No tables are ever made, nothing.

Your are not doing anything wrong.
I suspect a problem in JMS because some other customers have reported a potential problem like this one but they are not able to provide me a procedure to reproduce it.

I have added a fix in JMS 1.2.0 RC4 that may perhaps fix this issue but I am not sure and I have not yet received any customer that were able to explain me how to reproduce it.
For the moment, I am unable to reproduce and I have just tried to implement a rescue solution.

If you have a JMS 1.2.0 with a version RC4, I would like that you try to describe me a scenario that allow to reproduce this issue before updating to RC4.
To get the latest version , see the procedure in the FAQ http://www.jms2win.com/faq#sec-122

Hi,

I´m having a same kind of problem with following error:
Fatal error: Call to a member function children() on a non-object in ...administrator/components/com_multisites/classes/dbsharing.php on line 223

I tried to use another template for slave creation. My version is 1.2.0 RC2.

_____

Start to update your version.
The current latest version is JMS 1.2.5 that you can update yourself as explained in my previous reply.

To get the latest version , see the procedure in the FAQ
http://www.jms2win.com/faq#sec-122
