Master backend blank after deleting slave site

Posted by kaliya - 2009/10/21 22:54

Hi Edwin -

Thanks for your kind help with setting up a slave site on my dedicated server yesterday. :)

After deploying the slave I got a Successfully deployed screen, but the slave did not load. So, i deleted it to try and redploy it. Then my backend was gone totally blank, while the frontend works fine.

Can you maybe give me a hint to what I can do - the site is live and we are launching a public campaign tomorrow...:(

I have sent login details by PM.

Kind regards,
Sra Valentini/
Carsten Lind

Diagnostic Information
Joomla! Version: Joomla! 1.5.14 Stable 30-July-2009 23:00 GMT
configuration.php: Not Writable (Mode: 755) | RG_EMULATION: N/A
Architecture/Platform: Linux 2.6.18-164.el5 (x86_64) | Web Server: Apache/2.2.3 (Red Hat) (wecollaborate.org) | PHP Version: 5.1.6
PHP Requirements: register_globals: Disabled | magic_quotes_gpc: Disabled | safe_mode: Disabled | MySQL Support: Yes | XML Support: Yes | zlib Support: Yes
mbstring Support (1.5): Yes | iconv Support (1.5): Yes | save.session_path: Writable | Max.Execution Time: 600 seconds | File Uploads: Enabled
MySQL Version: 5.0.77 (Localhost via UNIX socket)

If you want that we configure, setup, have a look directly on your server, this is possible with billable support that you can order on
http://www.jms2win.com/download?page=shop.product_details&flypage=flypage.tpl&product_id=35&category_id=1
