There was an error uploading this file to the serv

Posted by chocian - 2010/02/07 21:27

Hi

I can't install the component
I tried few times and also on two different sites but still this same
Massage There was an error uploading this file to the server.

Any suggestions other components install perfectly.

Thanks For Help in advance.

Robert

A potential reason is the timeout of PHP.
Try to transfert the zip in a temporary directory in your server and after unzip it.
Once it is unzipped into a temporary directory, use the Joomla install from a directory.
This will avoid the timeout that may happen during the upload of the package.
JMS is now more than 2MB.

To install a product from a directory.
You can for example create in your "tmp" directory a directory like "jms".
Transfert the com_multisitesXXX.zip into the "tmp/jms" directory
Unzip the com_multisitesXXX.zip present in the "tmp/jms"
When done, you can provide the full pat in the joomla installation from a directy
Path like "/home/...../tmp/jms"
Now it should find the package.

This is error may appears if you don't have unzipped the extension into the a temporary directory or provided a wrong path on your disk.

solved, directory link was wrong. for others with similar problem ensure your filepath is correct
