

## Db error on creation of slave site

Posted by miami - 2010/04/26 04:39

---

All's working well with our slave sites, and I wanted to create a new slave, with the same Website Template, but with a different DB prefix, in this case, indl\_.

Error I am getting back is:

Error(1) query . DB Error: CREATE VIEW command denied to user 'indugua\_jo151'@'localhost' for table 'indl\_users' SQL=CREATE OR REPLACE VIEW indl\_users AS SELECT \* FROM `indugua\_jo151`.`master\_users`... etc.

Why?

You will find plenty answers in this forum. Always the same reason for "command denied"  
<http://www.jms2win.com/forum/search?q=command+denied+to+user>

You have to increase the privileges of your MySQL user to add "create and show view".  
Also explained in the tutorial video CP-02 and in 0.b - slide 35  
<http://www.jms2win.com/tutorial#jms12x-0b>  
<http://www.jms2win.com/tutorial#jms12x-CP-02>

Yup, that's it "create views, show views" on Cpanel.

cPanel does NOT provide this facility.  
If you are using a shared hosting, you have to contact the support to grant your user.  
If you have a dedicated server or have the "root" PHPMyAdmin, you can do it yourself.
