Possible problem editing a slave site

Posted by webcrack - 2010/06/07 01:29

Hi,

I'm not sure wether it is an error caused by my installation of a slave site or by component. When trying to edit such a site (no matter from front- or backend) an error message is shown :

You can not create additional website.
You are autorized to have a maximum of websites.
You already have websites.

Actually no additional site should be created, only some content should be changed.
Status is set to: 'confirmed'

What goes wrong ?

Thx for a hint

You have setup the JMS templates associated to the slave site to have a limit of maxiumum 1 slave site per user.
Review the JMS Templates associated to the slave site and perhaps change the limit or put no limit.

Solved.

Thank you
