MultiSites menu entries try to download index.php

Posted by greno - 2010/08/01 17:19

I installed JMS 1.2.33 in Joomla 1.6 Beta5 and it shows a successful installation.

Then when I go to Administration | Components | Multi Sites and click on any menu entry I get a popup window asking me to download 'index.php'. It's like there is some type of mime error.

Trying to download yields a 0 byte file.

The only error in the error_log is:
Cannot redeclare class jcachecontroller

Not sure what that error is but the rest of my sites all seem to be working without any problem.

On the chance that something unnoticed went wrong during installation, I uninstalled JMS and reinstalled it. But still have the exact same problem. It didn't make any difference.

Install the JMS 1.2.34 that should work better.
The 1.2.33 were working on Joomla 1.6.0 beta 3 but not on the other versiions.

I am currently preparing a JMS 1.2.35 that will solve other problem detected with Joomla 1.6.0 beta 6

See change history
http://www.jms2win.com/faq/change-history-v12x

See also the procedure to get the latest version
http://www.jms2win.com/faq#sec-122

I went to the 'get latest version' link and clicked on Get Latest Version button but it still shows 1.2.33 as

latest version. How can I get the 1.2.34 version to show up?

You have forgotten to click in the check box.
When you do not click on the product for which you want to get the latest version, it resend you the same version that you previously downloaded.

Checking the checkbox fixed the update issue.

However, uninstalling 1.2.33 and installing 1.2.34 did not fix the problem.

All of the links on the Components Menu work properly except for MultiSites. The MultiSites entries all try to download index.php as a 0 byte file.

The index.php can NOT be 0 byte.
Perhaps you have to check the permission to understand why it is a zero byte.
Is this a link ?

If you want that we have a look on your server and try debug why Joomla declare this JCacheController twice and return you a 0 byte, this is also possible with our billable support that you can order at http://www.jms2win.com/download?page=shop.product_details&flypage=flypage.tpl&product_id=35&category_id=1

As Joomla has release a beta 6, perhaps you could also try with this very.

The administrator/index.php file was not 0 bytes. But, MultiSites was trying to download index.php as a

0 byte file.

I finally fixed this problem by restarting apache.

Now I can get to the Manage Sites page and install the patches.

With the patches installed everything looks like it works except for the Layouts. It causes this error:

Warning:
InstallerController::require_once(/var/lampp/1.6.4/htdocs/Joomla-1.6-Beta5/administrator/components/com_multisites/helpers/installer.php) : failed to open stream: No such file or directory in /var/lampp/1.6.4/htdocs/Joomla-1.6-Beta5/administrator/components/com_installer/controller.php on line 35

Fatal error: InstallerController::require_once() : Failed opening required '/var/lampp/1.6.4/htdocs/Joomla-1.6-Beta5/administrator/components/com_multisites/helpers/installer.php' (include_path='.:/opt/lampp/lib/php') in /var/lampp/1.6.4/htdocs/Joomla-1.6-Beta5/administrator/components/com_installer/controller.php on line 35

ls -l /var/lampp/1.6.4/htdocs/Joomla-1.6-Beta5/administrator/components/com_multisites/helpers/
total 52
-rw-r--r-- 1 nobody nobody 37422 2010-08-03 11:59 helper.php
-rw-r--r-- 1 nobody nobody   44 2010-08-03 11:59 index.html

no installer.php in that directory.

Edwin,
  Is the 1.2.34 ok to use with this problem with the Layouts?

  It looks like it is missing the 'installer.php' file in the helpers directory.

YES the layout menu is still not work and will not work yet in JMS 1.2.35 that we will release soon.
We have not yet found how to have something compatible between Joomla 1.5 and 1.6 for this part.
You can use the layout in the front-end but you can not install additional layout in 1.6.
As we have not yet published additional layout, we given a lower priority to this part.

I remember you that we still consider JMS 1.2.34 as an alpha for Joomla 1.6.

See the release note that mention what is supposed working correctly.
http://www.jms2win.com/faq/change-history-v12x
A full Joomla 1.5 and 1.6 is not yet available and we working on it as you can see.
