Warning: mysqli_select_db() [function.mysqli

Posted by darrell - 2011/01/18 07:27

Running multisites Version 1.2.46 (Latest available: 1.2.46) and Patches definition Version 1.2.51 (Latest available: 1.2.51) on Joomla! 1.6.0 Stable 10-Jan-2011 23:00 GMT. Everything is working with Multisite on the Master. Unix Symbolic Links: Allowed MySQL Version: 5.0.91-log Sharing supported

Check patches installation
Joomla Multi Sites version: 1.2.46 (Latest available: 1.2.45)
Patches definition version: 1.2.52 (Latest available: 1.2.51)
Files Status
ALL OK

Installed another site domain slave1 and it is running on Joomla! 1.6.0 Stable

Separate Database. Writing to database.

However I receive the following error on Master .

slave id
Warning: mysqli_select_db() : Couldn't fetch mysqli in /homepages/htdocs/dotcom/libraries/joomla/database/database/mysqli.php on line 156

And at the bottom I see: Warning: mysqli_close() : Couldn't fetch mysqli in /homepages/htdocs/dotcom/libraries/joomla/database/database/mysqli.php on line 117

The slave site is functioning properly so far.

Can you give me more info on the slave site definition that you did to help me reproducing this scenario.

I see that you are using MySQLi
and using Joomla 1.6.0 stable.

I would like be able reproducing it and try discover where the "slave id" is used.
I searched in the sources and didn't find it.
Are you sure it is written "slave id"

==========

Re: Warning: mysqli_select_db() [function.mysqli

Posted by darrell - 2011/01/18 10:45

It is NOT written "slave id" that was my interpretation of (slave)record 1 field "id" the error is located in the id field.

Warning: mysqli_select_db() : Couldn't fetch mysqli in /homepages/htdocs/dotcom/libraries/joomla/database/database/mysqli.php on line 156

When I click on site details:

Master site directory: /homepages/htdocs/dotcom

Deployed directory: /homepages/htdocs/slave

Tools are functioning everything is working. Status is confirmed.

I am not completely sure what you mean by slave site definition?

Re: Warning: mysqli_select_db() [function.mysqli

Posted by edwin2win - 2011/01/18 13:30

_____

Slave site definition is what is defined in the "manage site" menu when you edit the slave.

So you moreless give me the info.

If I create a slave site with
Site ID = slave
Deploy directory = {root_dir/slave

Do you think that I will be able to reproduce it.
Did you create a fresh slave site and when you get the Joomla Installer selected mysqlI

Re: Warning: mysqli_select_db() [function.mysqli

Posted by darrell - 2011/01/18 19:15

_____

Did you create a fresh slave site and when you get the Joomla Installer selected mysqlI

Yes I created a fresh slave site. I used an existing DB PHP 5 when installed it and removed all old records. My deploy directory is root_dir/slave. My master dir is root_dir/master. The master is also a fresh install.

Do you think that I will be able to reproduce it.

You should be able to reproduce the error... the only difference: I use 1 and 1 shared hosting using php.ini in each deployed dir.

Re: Warning: mysqli_select_db() [function.mysqli
Posted by darrell - 2011/01/18 19:47

I just created another slave but this time I installed it in root_dir/master/slave2

It is also showing the same error in the Master (dotcom) .

Warning: mysqli_select_db() : Couldn't fetch mysqli in /homepages/dotcom/libraries/joomla/database/database/mysqli.php on line 156

But now I am getting an additional error in the first slave record.

Warning: mysqli::ping() : Couldn't fetch mysqli in /homepages/dotcom/libraries/joomla/database/database/mysqli.php on line 139

The slaves and master are all still functioning with no performance issues. All these errors are coming from the Multi Sites Master component only.

Posted by darrell - 2011/01/18 20:24

I do not want to cause any confusion here... but I thought I would try a different configuration with my

I changed all sites from mysqli to mysql and I receive this error in both records.

Warning: mysql_select_db(): 214 is not a valid MySQL-Link resource in /homepages/dotcom/libraries/joomla/database/database/mysql.php on line 135

==========

Re: Warning: mysqli_select_db() [function.mysqli
Posted by edwin2win - 2011/01/19 10:18

The error

Warning: mysqli_select_db() : Couldn't fetch mysqli in /homepages/dotcom/libraries/joomla/database/database/mysqli.php on line 156

Mean that Joomla 1.6.0 is not able to connect on the DB.
This is like the user and password that you provide to connection on the DB Server is not able to select the DB name you specified.

The Errro

Warning: mysqli::ping() : Couldn't fetch mysqli in

/homepages/dotcom/libraries/joomla/database/database/mysqli.php on line 139

Let suppose that the "ping" function in MySQLi is not available or perhaps disabled by your hosting provider.
Perhaps you coud investigate on the Joomla bug reports concerning Joomla 1.6.0

_____

We have tried reproducing what you described without success.

See the tutorial video 3 where we have added the version for Joomla 1.6.
http://tutorial.jms2win.com/joomla/multisite-12x/install-on-joomla-160/

_____

Your video does not show my multisite configuration so I do not see why this tutorial will pertain to me.

In the video you are creating a (subdomain as the master) and a jms2win.com/master/slave as the slave.

In the video you never show multiple domains, you are using the same domain (jms2win.com) each time to create subdomains with the same database.

jms2win.com/
jms2win.com/master/
jms2win.com/master/slave1/
jms2win.com/master/slave1/slave2/

My multisite configuration is:

masterdomain.com
slavedomain1.com
slavedomain2.com
slavedomain3.com

And I am using separate databases not the same database, ther is a huge difference compared to what you demonstrate.

==========

Re: Warning: mysqli_select_db() [function.mysqli

Posted by edwin2win - 2011/01/20 08:56

This is exactly the same in the video.
What ever the domain or subdomain or subdirectories, you written that you create a fresh slave site with a new Joomla installation using MySQLi.
This is what you can see in the video.
Change the domain name value does not change the creation of the slave site and the deploy directory does not change also the configuration.

This just demonstrate the the MySQLi ping function and the other "select" error that you report with the Joomla 1.6 library does not appear with our hosting company using cPanel.

Create and addOn Domain or a subdomain in cPanel with a "document root" give exactly the same result.
The database connection parameter is the one that you provide in Joomla Installer and not in JMS Multisites.
This is what is demonstrated with the Video and that the DB connection is correctly save and used by the slave.

If you want that we investigate on your server, we have a billable support that you can order at http://www.jms2win.com/en/joomla-multisite?page=shop.product_details&flypage=flypage_multisites.tpl&product_id=35&category_id=1

Re: Warning: mysqli_select_db() [function.mysqli

Posted by hukutas - 2011/02/10 05:06

Were you able to figure this out? I am receiving the exact same error using a separate DB. I did a var dump on the $this variable and from what I see this list is trying to connect to the main DB rather than the separate DB. I am going to do some more digging since it is OBVIOUSLY our issue and not theirs.

Re: Warning: mysqli_select_db() [function.mysqli

Posted by edwin2win - 2011/02/10 21:23

To help you, I need a scenario that I can reproduce.
For the moment, I am not able to reproduce this problem and therefore can not help you.

Try give me a scenario (step by step) that can be reproduce or better, give me a video that show how to reproduce it.

Re:Warning: mysqli_close() [function.mysqli-close]

Posted by darrell - 2011/08/01 12:05

_____

Six months ago I tried to make your component work but GAVE UP. I felt my investment was wasted. I never followed up because I wanted to give some time for Joomla to stabalize since 1.6 was RC. After six months I still continue to receive the same type errors w/ Multi sites. Everything installs correctly and works up until I add another site. I am on a shared package 1and1 hosting. But I still continue to get errors with your Component, nothing else causes errors like this and I run several Joomla configurations since 2005.

After adding a slave site it installs correctly but when I try to Mange Site I get the following:
500 - An error has occurred.

JDatabase::getInstance: Could not connect to database
joomla.library:3 - Could not connect to database

Return to Control Panel

Warning: mysqli_close() : Couldn't fetch mysqli in /homepages/1/html/htdocs/com/libraries/joomla/database/database/mysqli.php on line 148

Templates Tools Layouts and Settings all respond.

Chech for Updates returns : Error connecting to the server: failed to open stream: no suitable wrapper could be found

I am running Joomla! 1.7.0 Stable 19-Jul-2011 14:00 GMT
Joomla! Platform Version Joomla Platform 11.1 Stable+Modified 01-Jun-2011 06:00 GMT PHP Version 5.2.17
