Mysql error on list of sites
Posted by hukutas - 2011/01/29 19:05

_____

Warning: mysql_select_db(): 210 is not a valid MySQL-Link resource in /home4/coolnetr/public_html/libraries/joomla/database/database/mysql.php on line 135
Ever since upgrading to joomla 1.6 I get this error. Is there a fix for this?

_____

I don't know how you upgraded to Joomla 1.6 and if you used a specific tool to ugrade from 1.5 to 1.6. If you used a specific tool, perhaps it does not have upgraded all the slave site configuration files to joomla 1.6.

This error mesasge in Joomla 1.6 seems relative to a DB connection that is not correctly provided or correspond to a slave site that does not contain a Joomla 1.6 configuration.

_____

Correction. Did full 1.6 Joomla re-install along with 1.2.46 JMS and now recieve this error.

Warning: mysqli_select_db() : Couldn't fetch mysqli in /home4/coolnetr/public_html/libraries/joomla/database/database/mysqli.php on line 156

I can provide logs and screenshots if you wish.

_____

YES you can provide.
Also try providing a detailled scenario that can be reproduced.

There is an operation that you are doing that create this error.
The question is which one.

_____

This does not help reproducing the error.
You just show how to install the patches and this does not explain why you have the error in the list.

How did you created the slave if the patches was not installed ?
You display the list of slave before the patches.

_____

I get this error too, but I get it when I try to choose a template that I created.
It goes away if I choose -Fresh Slave Site- as my template.
I am new and trying to figure everything out, it could be that I have my template not set up correctly.
I did a fresh install of joomla! 1.6 and the newest JMS multisite.

_____

You did not give me any specifics on what you need. This is a screenshot of the template I am using to create new sites.
