Error after backup
Posted by simpt - 2011/04/23 10:14

Hi

After a akeeba backup I got this error in all menu.

JFTP::write: Bad response
JFTP::write: Bad response
JFTP::write: Bad response
JFTP::write: Bad response

I can't change the CDMOD to 777 on any folders??

I know that, you don't know have to perform a correct backup of the symbolic links and also how to perform a correct backup that share extensions.

Will it be best with a new jms multisites installation?

Regards
Simon

JFTP mean that you are using the Joomla FTP Layer.
So check the FTP Login and password that you setup in the Joomla configuration.

See the FAQ that give a procedure to perform a backup/restore
http://www.jms2win.com/en/faq/faq-joomla-multi-sites#cat-268

Re: Missing db-server DB Prefix and user
Posted by simpt - 2011/04/24 10:27

Thanks for your reply.

I found out it was the owner-name of the files in com_multisites that was wrong.

It may have changed in akeeba installer.

Can you please explain to me, how I restore Missing db-server, DB, Prefix and user i manage site?

Templates: Missing From DB and From DB Prefix?

Wiil it be okey if I restore the whole jos_ database with MySQL PhPMyAdmin?

Regards
Simon
