# Almost *none* of the Patches will apply

Posted by drweyant - 2011/04/26 19:47

---

I'm quite frustrated and hope you can help me. I have been trying for days to get this working, but it just isn't. I can't get past the patch install phase of set-up, much less any *actual* set up... I have checked every file & folder permission manually and I am at my wits end. Below, you will find my results page from the Patch Install, nothing changes. Please assist. Thanks in advance.

Not OK

* Different File/directory owner and group and WORLD has no write permission.
  Please check file/directory permission before applying the patches.
* The single sign-in patch for sub-domain is not present

Actions:

* Add 12 lines and replace 1 line by 15 lines to accept that sub-domain share the same session information for a single sign-in

components/com_content/helpers/route.php
Not OK

* Different File/directory owner and group and WORLD has no write permission.
  Please check file/directory permission before applying the patches.
* The wrapper for the Articles Sharing is not present

Actions:

* Add 4 lines containing the wrapper to redefinition of the route when Article Sharing is presnet

plugins/system/remember.php
Not OK

* Different File/directory owner and group and WORLD has no write permission.
  Please check file/directory permission before applying the patches.
* The single sign-in patch for sub-domain is not present

Actions:

* Replace 1 line by 15 lines to accept that sub-domain share the same session information for a single sign-in

administrator/components/com_jce/installer/installer.php
Not OK

* The "force overwrite" code is not present in JCE Installer.

Actions:

* Add 3 lines to allow Slave sites overwrite installations (Called from JCE -> Install)

administrator/components/com_virtuemart/classes/ps_checkout.php
Not OK

* The code to allow using the Joomla Multi Sites bridge with VirtueMart is not present.

Actions:

* Add 5 lines containing the call to a MultiSites / VirtueMart plugin onAfterOrderCreate.

administrator/components/com_virtuemart/classes/ps_config.php
Not OK

* The VirtueMart configuration file wrapper is not present.

Actions:

* replace 2 lines by 17 lines to write the configuration file into a slave specific file and to compute the master site wrapper code.
* Add 4 lines to insert the wrapper into the master virtuemart configuration file.

administrator/components/com_virtuemart/classes/ps_order.php
Not OK

* The code to call the Plugin VirtueMart onOrderStatusUpdate is not present.

Actions:

* Add 3 lines containing the call to a VirtueMart plugin onOrderStatusUpdate.

administrator/components/com_virtuemart/virtuemart.cfg.php
Not OK

* The routing wrapper is not present in the VirtueMart MASTER configuration file.

Actions:

* Add 5 lines containing the routing wrapper to the slave site.

plugins/system/CssJsCompress/css.php
Not OK

* The specific root path for each websites is not present.

Actions:

* Replace 3 lines by 30 lines to compute a specific root path for each slave site.

plugins/system/CssJsCompress/js.php
Not OK

* The specific root path for each websites is not present.

Actions:

* Replace 3 lines by 30 lines to compute a specific root path for each slave site.

Notes:

Some files needs to be patched.
Press the 'install' button to update your system.

---

Give the list of all the extension that can not be patched is not helpfull.

You probably received an error message that tell you that you are not able to write something of perform a copy of something error.

This is the symptom that you have a problem of permission on the files and folders.
Check also when you are using the FTP layer that the login correspond to the same owner of the files and folders.

In general the problem appears when the ownership of the file is not correct.
For example you have the owner of a FTP user and after this is apache that try modifying the files of the FTP user for which it does not have the permission.

So check the permission.

Ok thank you, this is the complete error listing on the install pane:

* Unable to write entry
* Error during installation of the file "administrator/includes/defines.php"
* Copy failed
* Copy failed
* Copy failed
* Copy failed
* Copy failed
* Copy failed
* Copy failed
* Copy failed
* Copy failed
* Copy failed
* Copy failed
* Copy failed
* Copy failed
* Copy failed

Message

* One or more backup file is missing. The original file(s) can not be restored.

Joomla Multi Sites version: 1.2.50 (Latest available: 1.2.52)  Get Latest Version
Patches definition version: 1.2.56 (Latest available: 1.2.57)

Please note that I have changed all permissions to 777

---

This is for sure a problem of permission.
Perhaps you could try using the Joomla FTP layer to provide more permission to copy and install the files.
See the Global Configuration and setup the FTP layer.

You probably have a problem of ownership on the files and folders that does not allow you updating them.
So verify the files and folder ownership as well as the chmod.

I was having the same problems as described.  This is definitely a server permissions problem. I had a shared cpanel based configuration.  I set all the folders to 775, but I kept getting a 500 error.  If this occurs, your hosting provider has restricted the server to not allow for 775 or 777 configurations due to security issues. Typically you will have to be on a VPS or dedicated server because most shared hosting companies are moving towards restricting the permissions of root folders.

I hope this info helps everyone experiencing this issues as it set me back significantly until I figured out what was going on.

-Justin

I have a VPS, but it still doesn't work..
How can i change the permissions using cpanel or other programs?

---

I suggest that you first verify the ownership of the file/

With a SSH terminal, you can enter
ls -l
that list all the files and folders and also display the symbolic links values

To change a permission of a file or folder, you can use
chmod 755
or for a recursive
chmod -R 755

If you want to change the owner of a file or folder you can use
chown owner:group

Perhaps you should ask to the administrator of your server to help you verifying the ownership and permission of your server.
If you want that we have a look on your server, this is also possible with out billable support that you can order at

For which folder/directory should i change permissions and ownerships rights?

still don't know how to solve this problem

is it possible to have a discount? we are students, we can't afford 75 euros per hour
