# Multi Sites tool is creating multiple copies.

Posted by ebizteam - 2011/07/29 15:11

_____

I am running Joomla 1.6.3 and version 1.2.54 of JMS. Everytime I create a new site, it creates multiple folder copies.

Here is an example:

/public_html/multisites/sitename/multisites/sitename/multisites/sitename/multisites/sitename/multisites/sitename/multisites/sitename/multisites/sitename/multisites

And it does this for every site I create. So inside the first multisites folder, there are the 5 sites I have created. Well, inside those 5 sites, there is another multisites folder in each one, with 5 more folders for each of the sites, and this continues 9 deep.

So, what starts out as 5 folders for my sites, turns into 25 folders, then 125 folders, 625 folders, etc...

You can see my problem. This is causing all my sites to run extremely slow, and I am afraid to create any more sites.

Is this an error in the code? Do I need to update with a patch? Is there some setting I need to change?

Please help!

Thanks

_____

It does not create plenty of folder but is using symbolic links.
This is absolutely normal that you have this "virtual loop" when creating the symbolic link on a parent folder.

If you want to avoid that, you just have to deploy the slave site into a directory beside the master like presented in the tutorial video 0b - slide 21-24.
