Slave site Joomla install error

Posted by hayniec - 2011/08/05 03:07

After installing multisites 1.2.54, I have created a slave site and run the Joomla install, on the very last step, I receive the error shown below.

Notice: Undefined index: DBtype in
/home/content/e/r/i/erichaynie/html/skyline/installation/installer/models/model.php on line 764

Fatal error: Call to undefined method JException::getNullDate() in
/home/content/e/r/i/erichaynie/html/skyline/installation/installer/helper.php on line 290

What have I done wrong, and how can I fix it?

Thanks for you help.

Which Joomla version do you use ? (1.5, 1.6 or 1.7) ?

I think you are using Joomla 1.5.

Check the type of DB that you selected during the installation.
If seems that the DB is not select or invalid.

Second hypothesis is that it was not possible to connect on the DB and get an install of a DB connection.
