article sharing
Posted by the_hell_rider - 2011/08/16 21:53

I've followed all the demo video, I succesfully create an slave. I need to share articles from the master site. I installed the article sharing extension through the jms tools everyithing is ok, but when I create the menu item at the slave site as a category blog or whatever, the category combobox doesn't retrieve any categories for the master site, the same with articles? What is wrong...please help!!!

Really really really appreciated your help

greetings

PD: Yes there are sections and categories and articles created in the master site

I realized that when you choose category blog layout you can't choose the section that's why there are not categories to retrieve (is this a bug or something??)

When you choose article layout or section it works fine

please comment

Definitely there is a bug cause even when i don't choose the site, it displays me the master site section/categories...it should be filtered by the site you choose...

Is there any way to get not the last version of the article sharing component...sometimes the last version is not stable at all??

_____

I confirmed the bug with the Article Sharing 1.1.x and under Joomla 1.5. That was OK on Joomla 1.6.

It is fixed in the version 1.1.2
See the FAQ for the procedure to get the latest version.
