Frontpage Slideshow Posted by profebral - 2011/10/11 08:0

I am having problems with my slave accessing the /modules/mod fpss folder. For some reason the symlink is not being found. The master can find it. I think this is causing problems with Frontpage Slideshow. preventing it from loading scripts.

I need to access www.slave.com/modules/mod fpss/ but it wont. However www.master.com/modules/mod fpss/ does work.

The module works in the administrator panel, but the image does not show when I am editing it. I noticed the symlink will not return the actual file.

Can you give screenshot to illustrate the problem.

Which version of Frontpage Slideshow do you use?

Re: Frontpage Slideshow Posted by profebral - 2011/10/12 00:08

I actually think this is related to the symbolic link problems I am having. I will be communicating with my host to determine the resolution. If the error persists I will inform you in this thread. Thanks Edwin.
