Call to protected JDatabaseMySQLi Posted by joekker - 2011/11/02 12:07
Hi,
I'm trying to copy the master site for two days but I get the below error message.
Fatal error: Call to protected JDatabaseMySQLi::construct() from context 'Jms2WinFactory' in /home/hollo42/public_html/kozosseg/master/administrator/components/com_multisites/libraries/joomla/jms2winfactory.php on line 336
Please, tell me what I'm doing wrong. I'm convinced I did everything as in the tutorials. Details you can see on attached images.
I run Joomla 1.7.2 Jomsocial 2.2 (if matters) Multisite 1.2.52
To things: - it's interesting, but the site is created, that it works or not I'm not convinced. Creating anew user in the forntend caused problem I have not such a kind of problem with 1.5
Thank you!
Jozsef

Update JMS with the latest version. With Joomla 1.7.2, it is recommended to use JMS 1.2.68. See the FAQ for the procedure to get the latest version http://www.jms2win.com/en/faq/faq-joomla-multi-sites#cat-122

Hi,

OK. If I may questions regarding this:

JMS, multisite for joomla - Joomla Multiple Sites and user sharing

Generated: 13 December, 2025, 11:51

- 1. Using multisite with 1.5 jomsocial can be seen as shareable component. With my present version of multisite, in joomla 1.7 not. 1.2.68 makes jomsocial also shareable in joomla 1.7?
- 2. Is it shure that the error message I got is because of the old version, and the purchasing the upgraded version for shure won't appear the error message?

Thank you for your answer!
