Problem with JMS and com_wordpress

Posted by titus - 2011/12/14 16:23

Hi,

Seems wordpress for joomla (com_wordpress) doesn't run with JMS whereas I saw here
http://www.jms2win.com/en/faq/patches-definition-v12x/261-patch-version-1252-add-patch-for-jre-cache-and-other-extension-for-jms-tools
To explain, when i patches are install it doesn't work.
When unisntall, it works.

My config:
Joomla 1.7
JMS 1.2.64 (patches 1.2.68)

Any idea ?

Wordpress version 2.9 is working perfectly but there are issues with Wordpress 3.x that were reported to Wordpress and which we never received any answers.

So report the potential issue to wordpress.

:(
Thanks for your reply,
I will try to post an issue... Have you got the issues in a mail so that i could give them ?

I can not give you the email because it was sent with another customer info included inside.
